

Specialty Seed Mixes

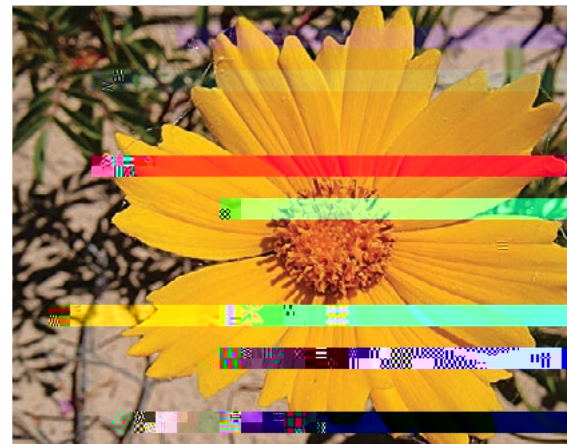

GREAT LAKES DUNE

This dune seed mix contains species found in the fore- and back-dune areas around the Great Lakes. This mix is intended to be used in areas of disturbance to stabilize sandy soils. It is recommended that this mix is supplemented with bare-root dune grass (*Ammophila breviligulata*) plantings. Because dunes are dynamic zones, other erosion control methods may also be required. This Midwestern native seed mix includes at least 4 of 5 native permanent grass species and 7 of 9 native forbs species. Apply at a rate of 49.22 PLS pounds per acre.

<i>Calamovilfa longifolia</i>		
<i>Elymus canadensis</i>		
<i>Koeleria macrantha</i>		
<i>Panicum virgatum</i>		
<i>Schizachyrium scoparium</i>		
<i>Avena sativa</i>
